Field Application Engineer – Level 1

Description

IndustrialEnet is an OEM systems company, in partnership with a consortium of key vendors, that specializes in video, network, and radar-based automated Security systems for Fortune 100 companies. Our primary vertical markets are ITS (Intelligent Transportation Systems) and Critical Infrastructure (Energy and Data Centers). We provide overall system design and planning, equipment, networking, programming, commissioning and ongoing support.

We are experiencing strong growth in our vertical markets and need to add to our Engineering Services group. The successful candidate will design, program, commission, and maintain complex industrial network and video/radar solutions. We will train the right candidate on our technology, and this position will have to travel up to 50% on average for onsite project support.
